Features that I want on the flask web app now:
- Navigation bar on the top with filler logo, I am having one made
- A register and sign in page with security
- A reset password function
- I want two pages a home page where the user would record and a listen page where the user can look up other users
- A recording function that doesn't require a download to use preferably with a counter function to let the user know how long they have been recording for
- Media player that can be moved around the page under the questions that requires no downloads to use
- Css bootstrap
- Files stored locally
- An image in each page from the static folder, image can be filler image for now

Features that I want in the future:
- An about page
- A page that allows the user to make changes to their account like email or username
- An FAQ's page
- An chat bot that acts as a help function
- An offsite payment link like square or plaid
- The audio files to be stores on an amazon bucket and not locally
- A website footer that acts as a description and a navigation help
- Customizable media player
- A landing page for when you sign in asking if you want to record or listen with links for each of the buttons to the right pages
- A testimonial function on the footer that will change every 30 seconds to a new testimonial
- A referral link option for users to send others to sign up with that allows me to keep track of how many people they get to sign up
- A way to track how many people listen to a users stories and their most listened to story (this is for the knowledge of me not the user)
- Adding a limit to the recording like 15 minutes
- Adding a way to find out how much memory a certain user is taking up in order to set a limit per user
